

INTEGRATED SERVICE COLUMN/ PANELS

Applicable Projects – Laboratory Projects

The modular service columns provide an integrated yet flexible facility for power, datacomms, gases and exhaust vents to laboratory equipment as well as accommodating gas regulator panels and R.C.D. enclosures.

The columns were designed in-house and fabricated in laminate faced mdf by Thorpe Kilworth Ltd, using site fitted standard three compartment pvc electrical trunking. Removable access panels fixed with Allen key fittings ensure easy access to gas/ drain/ exhaust services.

The wall mounted service panels provide an integrated service solution for mobile benching in the laboratory environment and include liquid services with the ease of push-fit connections in a typical installation.

Standard detail drawings provided for typical applications.

- Design of standard panels to accommodate proprietary service outlets & trunking.
- Prefabrication of standard units reduces site installation time
- Designed-in service separation, routing and maintenance access
