

## **‘ROOF- PRO’ PLANT SUPPORT SYSTEM**

### **Applicable Projects – External Plant Systems**

Benefits -

The use of adjustable external plant support systems have provided particular benefits in siting roof mounted plant (condensers, heat recovery units etc), on flat roofs where future access for maintenance is required.

The steel support legs have rubber feet which reduce the problem of damage to felt membranes while the raised adjustable framework provides clear access beneath plant for re-roofing works.

The lightweight support frame also helps minimise the dead load imposed on the roof.

Contact details – ROOF-PRO LTD Tel 01234 843790 Email;
