

Heavy Duty Pallets

Completely fed up of seeing new pallets destroyed, lost or stolen within weeks, Peers have fabricated their own Heavy Duty Pallets. This will save money, timber, reduce waste packaging materials, maximize space and make lifting safer.

Key Points: -

1. Fabricated from box section posts with open mesh flooring and plate sides the pallets are extremely robust and long lasting. Empty weight is 50kg each
2. Tapered Feet have been provided to make staking easy and safe.
3. Special lifting lugs have been provided to make loading by crane safer.
4. Each pallet has an individual number for easy identification on site.
5. The Galvanised finish is cost effective, very hard wearing and will not contaminate or discolour any of the contents.
6. The Kick flat sides add extra security for loose items such as bags of bolts.
7. Shrink-wrap is often not required so less waste material. Shrink-wrap and banding straps are not biodegradable so this is a big environmental plus.
8. Stacking on the wagon and on site ensures optimum space saving.
9. Company logos have been added to all sides so there is no doubt who the pallets belong to.
10. Good quality timber pallets can cost up to £25 each, these heavy-duty pallets will cost around £175 each but should last 50 times longer.
