

Flush Clean Room Trunking

A proprietary clean room system with bespoke 2 compartment trunking built into the panel system. Developed to satisfy client requirements for flush walls

Advantages

- Flush wall to clean room
- Looks very clean
- Flexibility of service locations (no permanent cut outs)

Disadvantages

- Cannot have back to back services to adjacent rooms (in practice this apparent disadvantage was not actually a problem as adjacent wall panels may have the trunking reversed).
- Limits on number of cable drops to serve each end for separation of power and data
