

## Temporary Floor Protection & Walkways

Where it is important to keep the interior of a project clear from excessive dirt and debris or to protect existing surfaces it may be useful to use 'Rhino Tiles' (or similar) to provide a clean and robust pedestrian or vehicular path to the building.

### Key Points:-

1. Floor tiles are heavy duty allowing use for vehicles and plant if required (Note: must be segregated from pedestrian access)
2. Provides a flat, slip resistant access route.
3. Comes with a ramp edge strip that makes them fully accessible with trolleys and other loading equipment.
4. Made from 100% recycled material
5. Flame retardant.
6. Can be used as an effective onsite safe walkway system.
7. Simple interlocking assembly.
