

# Matterport 3D Scanning

Matterport is a scanning tool that has various options from using an apple product, a 360° handheld camera to a 3D 4k camera with infrared scanning similar to the picture below. The scanned area is uploaded on completion to the cloud for users to access via secure login. Users can then add notes, measure ( $\pm 1\%$  accuracy) and walk through the model. Cloud point, video images, reflective ceiling and floor plan layouts can also be downloaded from the system.

## Key Points:

- Significantly reduces the amount of on-site survey time on a project
- Enables interactive discussions during project meetings around areas of concern
- Can provide accurate accounts of projects before and after completion
- No software needed for viewing the captured 3D model space
- Capable of completing a 3D scan with 4K image quality
- Captures, Horizontal 360° view, Vertical 300° view
- Fast upload times for transferring the model from the IOS app, to the Matterport website for others to view
- App available to all apple products, which allows you to capture the images.
