

Telescopic Mobile Tower

The telescopic mobile tower is another 'tool in the bag' for working at height solutions. The version available at the time of writing gives 7 different working platform heights from 0.33m to 2m and has a safe working load of 150kg.

It packs away to being a small package (42 x 82 x 105cm) which makes it very easy for transportation. The folded down version is also able to be wheeled so it makes it very easy to transport down corridors and in lifts (see picture on right).

The tower is very quick and easy to erect (see u-tube video comparing it to erection of a traditional mobile tower)

<https://youtu.be/HQWGt8wGhpw>

The tower also has fewer loose parts which means they are less likely to get left behind, lost or damaged. In its folded away state it is also easy to store.

Restrictions

- Not suitable for uneven ground or slopes
- There are a lot of joints and moving parts which could get clogged up if the work activity is very messy
- Single person use on platform
