

Planned Preventative Maintenance Software

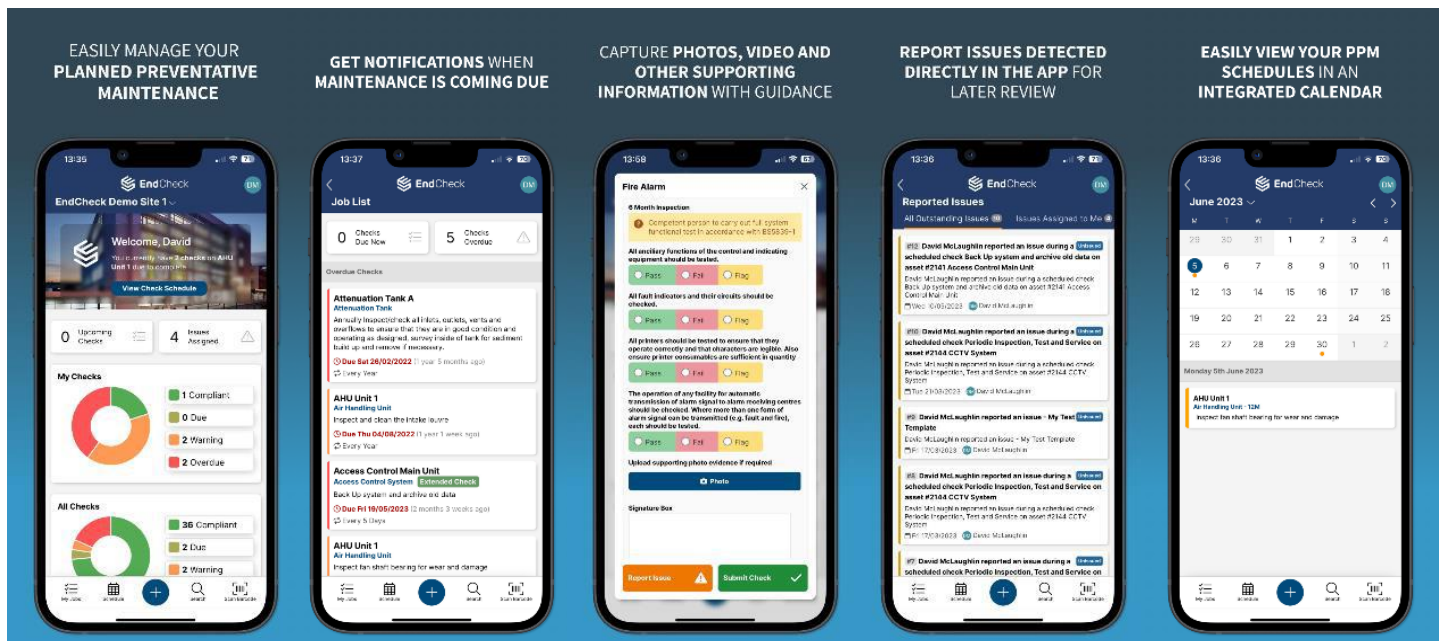

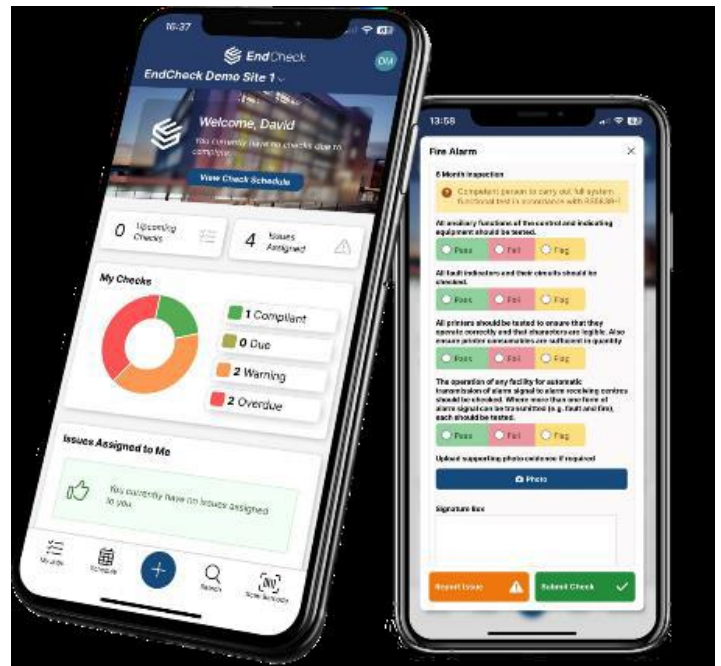

EndCheck is a new interactive frequency based Planned Preventative Maintenance (PPM) tool from End Systems.

A live PPM tracker is created that alerts the facilities manager in real-time when frequency-based maintenance tasks are to be carried out. The **EndCheck** App can be downloaded to a mobile or tablet which enables checks to be carried out, signed-off and any faults logged.

EndCheck creates a live tracker of the maintenance tasks and using a traffic light RAG system can report task completed, tasks overdue or faults logged/ defects raised.

EndCheck is a cloud-based application

EndCheck has the following options for reporting and recording:
