

# **ScaffGrip Board & Tube**

ScaffGrip are lifting accessories designed to provide a convenient and effective method of lifting scaffold tubes and boards in safer manner. They provide a grip around the scaffold board or tube to prevent the item from slipping or dropping during lifting and as a consequence help reduce accidents. The ScaffGrip lifting slings have a safe working load of 30Kg making them suitable to lift all standard wooden scaffold boards and steel scaffold tubes.

## **Key Points**

- These products have aided the business in reducing dropped objects from lifting operations that was a trend in high potential events.
- The simplicity in use allows the reduction of potential of human error that was a reoccurring contributing factor of dropped objects.
- The speed of securing is quicker than a traditional scaffolding knot process.
- Training is simple, quick and effective.
